OVERVIEW

The IFS® Industrial Gigabit Managed Switches by Interlogix are fully managed Layer 2 switches providing an industrial hardened design. This design provides for operational recovery in the event of a network or power system failure.

The IFS NS3550-8T-2S is an Industrial Gigabit Managed Switch equipped with eight 10/100/1000Mbps RJ45 ports and two 100/1000Mbps SFP (fiber) uplink ports.

The IFS NS3550-2T-8S is an Industrial Gigabit Fiber Managed Switch equipped with eight 100/1000Mbps SFP (fiber) ports and two 10/100/1000Mbps RJ45 ports.

Layer 2 Managed Switch

The IFS Industrial Gigabit Managed Switch Series supports advanced features including IEEE 802.1Q VLAN, GVRP, port link aggregation, QoS, broadcast storm control and MAC address filtering. The series also includes IGMP snooping and querying multicasting for media operations and bandwidth utilization to fit a variety of applications. Via aggregation of supporting ports, the series allows the operation of high-speed trunk operation combining multiple ports. A maximum of four ports can be assigned for four trunk groups and support fail-over as well. Additionally, the IFS Industrial Gigabit Managed Switch Series is compatible with equipment from other vendors that meet IEEE 802.3 standards.

Industrial-grade Network Redundancy and Recovery

These switches not only incorporate the industry standard Rapid Spanning Tree Protocol (IEEE 802.1w RSTP), but also a rapid ring recovery protocol allowing improved network recovery times that are on average less than 20ms for redundant ring topologies. The switches incorporate a redundant power supply system to further enhance network reliability and uptime. Ideal for use in implementing highly fault-tolerant ring and mesh network architectures, these switches are well suited for harsh environments such as industrial security, factory automation and intelligent transportation systems (ITS).

Robust Hardened Design

With an IP-30 rated enclosure, IFS Industrial Gigabit Managed Switches provide a high level of immunity against electromagnetic (EMI) and radio-frequency (RFI) interference typically found in industrial environments. This series of switches comply with IEC60068-2-xx standards for free-fall, shock, and vibration and operate in -40°C~75°C temperatures found in difficult environments such as plant floors or in curbside traffic control cabinets.
