Pressure Relief Valve R4V

Proportional Pressure Relief Valve R4V...P2

Publ. 3-EN 2400-B, replaces 3-EN 2400-A

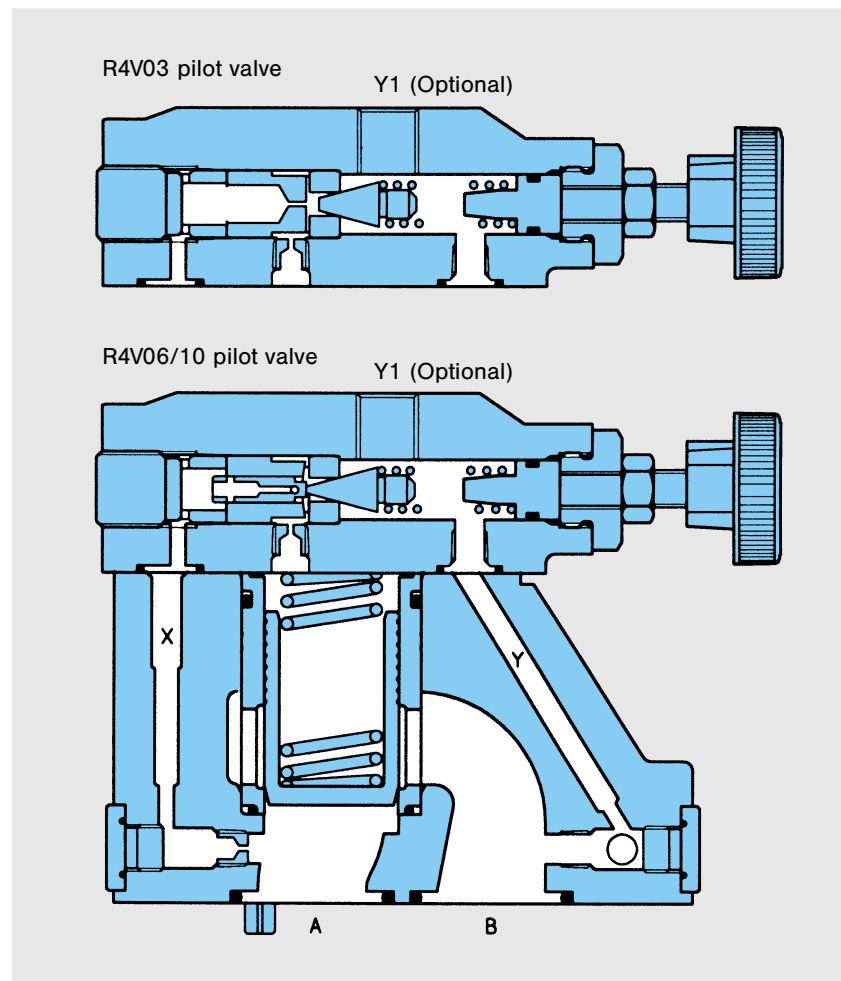

DENISON Hydraulics

FEATURES, SYMBOL

FEATURES

- **High Performance:** R4 valves are designed for a maximum pressure of 350 bar and a flow capacity ranging from 90 l/min ($\frac{3}{8}$ "") to 600 l/min ($1\frac{1}{4}$ "").
- **Sensitive Control:** The DENISON poppet design delivers the minimum possible friction, superior hysteresis and optimum response to changes in operating conditions.
- **Wide Selection:** In addition to the various mounting options for the main valve body, or as cartridge for manifold applications, the ordering code offers a range of control options for valves and accessories. A solenoid vent valve is available (VV01).
- **Standardized Mounting:** Mounting configurations for R4 Pressure Controls are in accordance with international standards, and conform to ISO 6264. Vent valve option allows for remote pressure control.

SYMBOL

DESCRIPTION

GENERAL

DENISON Pressure Valves are pilot operated controls consisting of two or three sections; either a high flow, poppet type seat valve section controlled by the low flow, adjustable pilot mounted on top or in the case of the Proportional Pressure Relief Valve, the proportional section P2 sandwiched between the pilot stage and the main body.

R4V Relief Valves are used to limit the system pressure of a hydraulic circuit. Pressure is set by the control knob on the pilot, or according to the current input on the R4V . . . P2.

The R4V can be vented electrically by means of an optional vent valve, VV01. This valve is mounted between the pilot valve and the main body.

With the DENISON combined Seat Valve and Pilot design, and the range of springs available, it is possible to achieve extremely precise pressure setting.

All valve components are subject to rigorous quality control, based on international standards, thus permitting worldwide operation and interchangeable spare parts.

OPERATION

The system pressure in Port A is applied, via an orifice in X, to the pilot valve, the proportional valve (where present), and to the top surface of the main poppet. The hydraulically balanced main poppet is held against the seat by the main spring. In this state there is no flow through the valve.

The adjusted spring force acting on the pilot cone determines the relief pressure. If the pressure in Port A exceeds the set point, the pilot cone is lifted from its seat, releasing a small pilot flow to tank.¹⁾

The flow through the control orifice in X creates a pressure drop which limits the pressure at the top of the main poppet to the set point.

The higher system pressure in Port A now lifts the main poppet off its seat and allows flow to Port B.

In the resulting float position only enough flow is passed from Port A to Port B to maintain the inlet pressure in Port A at the set point.

When the pressure in Port A falls below the set point, the hydraulic balance on the main poppet is restored. The main spring then forces the main poppet to close.

¹⁾ The proportional valve P2 varies the pressure applied to the top of the main poppet, in proportion to the current input to the solenoid.

The manual setting of the pilot stage determines the maximum pressure and should be approximately 10% higher than the max. adjustable pressure of the proportional section (see also page 13).

The pilot drain chamber/proportional drain chamber is normally connected to Port B. Alternative external drain option through Port Y or Port Y1 available.

PROPORTIONAL PRESSURE RELIEF VALVE R4V...P2

Screws for additional proportional section installation
 4 x 3/8"-24 UNF x 3 1/2" lg., order no. 359-15340-0.

Drain Line:

- a) only external from the pilot head Y1, to a stable low pressure tank line (for threaded main stage)
- b) external from the pilot head Y1, or from the subplate Y to a stable low pressure tank line, (for subplate mounted main stage)

Symbol

Distance required to remove plug-in connector.
 Plug-in connector supplied as standard.

Important: On initial start up and after long shut down periods bleed air from this plug.

Note:

See publication 3-EN 2200 for information on Electrical Proportional Control Valve.
 For additional installation with pilot operated control valves please consult DENISON.

VERSION WITH VENT VALVE VV01

Weight: (VV01): 1.7 kg

Screws for additional vent valve installation.
 4 x 3/8"-24 UNF x 3 1/2" lg., order no. 359-15340-0.

Symbols:
 R4V-Relief Valve with Vent Valve VV01

Code	Internal Drain	External Drain
11 or 12		
09 or 10		

Note:
 For full details of the vent valve VV01
 refer to bulletin 3-EN 2150.

ADDITIONAL TYPES OF CONTROL

Type of Control-Code 2
Hand knob 50 mm dia.
(not for version with
vent valve VV01 or P2)

Type of Control-Code 3
Acorn nut with lead seal

Type of Control-Code 4
Adjusting device with key lock.
Key must be ordered separately,
order-no. 700-70619-8

The product described is subject to continual development and the manufacturer reserves the right to change the specifications without notice.
